Hey guys,

The analytical data came in yesterday late afternoon and I apologize for not being in touch until now. The sample as you know was run for the benefit of disposal, hence RCI, TCLP etc., which we chose as the methods for an aqueous waste are very similar if not identical to, totals. The data showed only one parameter – Trichloroethene, result 0.274mg/l. Reasonably we can assume that the drum contains water with residual TCE. We are currently moving ahead with disposal quotes (looking like ~\$650) for disposal as a non-hazardous waste water. We can schedule the disposal for next week if you are happy with everyone being able to coordinate. Manifest and the profile will need to be signed by the generator, this can be done on-site at time of recovery (manifest only, profile in advance of milk-run), or I can have it fedex'd over. Will have more details tomorrow. Please find the data attached.

Thanks

James

I saw that you called. Did you need something? I saw the message that the data was in. How does it look?

Thanks

Jon
